

EXECUTIVE PROFILE

Operator-technologist who turns ambiguous demand into visible priorities, executable work, and adopted operating mechanisms. Connects business stakeholders with technical teams; defines decision ownership, release conditions, governance, and evidence; and keeps work moving without confusing process volume with business value.

Data product prioritization

BI & analytics delivery

Stakeholder translation

Release readiness

Adoption & value evidence

AI-assisted workflows

Decision cadence

Lean / Gemba

SELECTED EXPERIENCE

Vape-Jet · Director of Operations 2025–Present

- Leads AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, ERP/Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows.
- Connects factory, field, customer, and machine-fleet signals into prioritized work, earlier risk detection, cleaner handoffs, dashboards, standard work, training, and accountability.
- Works directly across a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots informing operating feedback loops.

DudeWorth · Founder / AI & Automation Advisor 2017–Present

- Develops AI-readiness and opportunity frameworks spanning business value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value.
- Designs agentic workflow patterns using structured context, retrieval, human judgment, escalation, evaluation, decision records, and governance rails.
- Advises on AI-enabled operations, logistics technology, warehouse automation, transportation systems, network analysis, and workflow design.

ROLE-ALIGNED OPERATING POSTURE

- Form and defend a point of view on what should—and should not—be built.
- Translate vague demand into a decision, owner, scope, tradeoff, and evidence plan.
- Carry ownership through quality, validation, access, usability, adoption, and learning.

VERIFIED TECHNICAL TOOLKIT

Agentic AI · LLM workflows · RAG patterns · Human-in-the-loop design · Python · SQL · JavaScript · TensorFlow · Tableau · ERP/Odoo · Jira · Confluence · HubSpot · Slack · GIS/mapping

PLATFORM BOUNDARY

Verified: analytics delivery, Tableau, SQL, Python, data-informed operating systems, agentic AI, ERP/CRM/workflow integration.

Role ramp: Power BI and Microsoft Fabric. No production-estate ownership is claimed.

DATA-PRODUCT OPERATING MECHANISMS

Qualify demand Decision · owner · consequence · value · readiness	Control delivery Scope · tradeoffs · blocker · next decision · stakeholder update	Clear release Quality · validation · access · usability · support · authority	Close adoption Use · workflow behavior · friction · outcome evidence · learning

EXPERIENCE CONTINUED

Amazon · Operations Management / Site Leader

2014–2018

- Led launch and execution for Amazon Prime Pittsburgh in a 24/7 customer-backward environment supporting approximately five million second-day orders annually.
- Built leadership routines, labor planning, throughput visibility, escalation paths, standard work, and operating mechanisms across safety, quality, customer experience, and flow.
- Applied Lean and Gemba practices to expose constraints, align priorities, and turn frontline feedback into operating action.
- Contributed to logistics innovation through Prime Air research and Amazon Flex geolocation concepts.

Compunetics · Director of Operations and Engineering Management

2000–2013

- Progressed through R&D program management, production management, strategic acquisition, operations management, and director-level leadership.
- Led engineering, manufacturing, quality, customer delivery, and complex technical programs in advanced electronics and high-reliability environments.
- Built quality systems, standard work, root-cause practices, performance measures, and process controls; collaborated with high-consequence customers and partners including DoD, CERN, Intel, and AMD.
- Published industry articles, delivered technical talks, and participated in the HyperTransport Consortium.

Cardinal Building Products · Regional Director

2021–2023

- Built the company's first remote regional operation and modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, and online-buying workflows.
- Advanced AI-enhanced transportation-management and route-planning concepts.
- Connected distributed commercial and fulfillment activity through clearer digital workflows and operating visibility.

ZeusVu · Chief Pilot, Autonomous Systems and Aerial Data Operations

2018–2022

- Led regulated drone operations across medical, energy, logistics, real-estate, and restricted-airspace contexts with a 100% safety record and no FAA incidents.
- Developed TensorFlow-based concepts for automated aerial inventory and computer-vision-enabled field intelligence.
- Designed medical drone-delivery and chain-of-custody concepts connecting technology, risk, stakeholders, and governed execution.

Enviro Social Capital · Chairman of the Board

2014–2017

- Co-founded and led a public-private impact initiative focused on sustainable infrastructure, green finance, and civic transformation.
- Helped shape and evaluate a \$200 million Social Impact Bond feasibility concept for Pittsburgh sewage and green-infrastructure improvement.

IEEE · CMPT and EDS Pittsburgh Chapter Chair

2012–2016

- Led regional technology programming connecting industry, academia, STEM outreach, electronics, manufacturing, and emerging technology.
- Organized conferences, seminars, business tours, and technical programming.

EDUCATION

University of Pittsburgh

Bachelor of Science
Academic grounding includes materials science, physical chemistry, and biology-related studies.

CREDENTIALS

- Google AI Essentials
- IBM Enterprise Design Thinking Practitioner
- Six Sigma Certification
- OSHA 10

WHY THE EVIDENCE TRANSFERS

The common mechanism across environments is making complex work visible, connecting technical and business teams, setting operating cadence, defining controls, clearing blockers, and converting feedback into a better system.

ARMADA CANDIDATE THESIS

Turn analytics demand into adopted decisions through an Outcome Cross-Dock: name the decision, stage the load, route the work, clear the release, and receive the outcome.
