ARMADA Supply Chain Solutions
2000 Innovation Drive
Wexford, Pennsylvania 15090

ARMADA's posting describes a practical but demanding mandate: decide which analytics work matters, keep delivery moving across BI and Data Engineering, and remain accountable until the result is used. That is not request management. It is an operating-product role.

My career has repeatedly placed me at that boundary. At Vape-Jet, I work directly across production, quality, purchasing, support, customer success, engineering issue flow, ERP/Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows—turning signals into visible priorities, cleaner handoffs, operating mechanisms, and accountability. Through DudeWorth, I have built frameworks that qualify AI and automation opportunities by value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value. At Amazon, I built operating cadence, throughput visibility, escalation paths, and standard work in a 24/7 customer-backward environment. At Compunetics, I translated across engineering, manufacturing, quality, and customers in high-reliability technical work.

I also want to state the obvious concern directly. I do not claim ownership of a production Microsoft Fabric estate or deep Power BI tenure that is not verified. My evidence is strongest in the product and operating layer around the stack: clarifying decisions, prioritizing work, translating business needs, coordinating technical delivery, defining release conditions, driving adoption, and learning from post-release evidence. I would validate platform fit quickly through one bounded Power BI/Fabric workstream while contributing immediately in those disciplines.

I created an independent candidate vision at <https://russelldudek.github.io/armada/>. It demonstrates the Outcome Cross-Dock: a lightweight mechanism that moves a request from business decision to disposition, release contract, adoption receipt, and portfolio learning. The site also includes a 90-day entry plan, an interview thesis brief, and a one-page review artifact.

ARMADA's public promise is intelligence that acts. My thesis for this role is simple: internal analytics should be held to the same standard—clear enough to guide a decision, trusted enough to use, and owned long enough to produce evidence.

I would welcome the opportunity to discuss where ARMADA's data-product flow is strongest today, where it stalls, and what one workstream could prove in the first 30 days.

Carpe diem,
Russell Dudek
