

Evidence boundary and public sources

The candidate vision separates publicly documented facts, verified candidate evidence, and hypotheses for interview discovery.

ARMADA SOURCES

Source	Use
armada.net	Current company positioning: orchestrated supply chain, data/AI platform, visibility, intelligence and action.
armada.net/company	Values, history, Pittsburgh/Wexford location, technology and acquisition timeline.
armada.net/solution/pro-technology	PRO® positioning: reliable data, unified platform, faster decisions, AI-powered insights, early alerts, machine learning.
Strategic integration announcement	2026 brand integration, aligned leadership, streamlined operations, and accelerated-growth context.
McDonald's Supplier of the Year announcement	Current execution, innovation, collaboration, and operational-excellence signal.
Manager Data Products posting	Role mandate, responsibilities, qualifications, success definition, and explicit exclusions.

BRAND ASSET PROVENANCE

The campaign uses ARMADA's official footer SVG for nominative identification. The publication workflow retrieves `https://www.armada.net/wp-content/themes/amd2024/public/images/logo-footer.3a20a9.svg` directly from ARMADA's current website and commits it locally under `assets/brand/`. The mark remains unmodified and is displayed on a restrained navy field for legibility. Colors are source-sampled from ARMADA's public identity and labeled as such. Lato is used as a licensed structural substitute for ARMADA's bold, clean public sans-serif character; no proprietary font files are copied.

CANDIDATE EVIDENCE BOUNDARY

Career facts, titles, dates, metrics, credentials, and toolkit claims are limited to verified candidate evidence. Power BI and Microsoft Fabric are treated as a role-specific ramp area; no production-estate ownership or unverified platform tenure is claimed.

HYPOTHESES FOR DISCOVERY

- The 2026 enterprise integration may increase demand for shared definitions, visibility, and reusable internal data products.
- A lightweight portfolio and adoption layer may reduce escalation, surprise, and rework.
- The strongest first proof may be one bounded Power BI/Fabric workstream with a real decision owner and observable adoption path.
